Leading in POS Technology

# POS ColorTouch

**Excellent performance**

**Elegant design**

The Vectron ColorTouch is characterised by excellent performance and innovative design. The large, splash-proof display is equipped with an interactive touch-screen surface, enabling rapid, intuitive operations. The TFT-screen guarantees high image quality and offers flexible and extremely diverse input options.

- Brilliant image quality via 12.1" (30.7 cm) TFT colour display
- Intuitively operable touch screen
- Fast, high-performance 64 bit processor
- Elegant, splash-proof designer housing
- Minimum space requirement whether upright or hanging installation
- Numerous interfaces for peripheral devices
- High system stability, as neither fans nor hard drive are necessary
- Simple data backup via USB stick
- Flexible graphic user interface
- Protection against viruses and manipulations via Vectron's own operating system
- Adjustable software with a range of industry-related special functions
- Simple network installation via Ethernet industry standard
- Extensive back office connection options
- Ideal in combination with the Vectron ServiceCall

Vectron Systems

Leading in POS Technology

## POS ColorTouch

### Large colour touch screen

The TFT colour screen, which measures 12.1" (30.7 cm), provides ample space for clear, simple operations. The SVGA resolution with 800 x 600 pixels and effective background lighting ensures brilliant image quality. An optional customer display with 2 x 20 characters can also be integrated in the housing.

### Space-saving installation options

The Vectron POS ColorTouch offers a wide range of placement options, whether stored in the optionally available stainless steel stands, hung on the wall to save space or built into sales counters. The device always blends into its surroundings perfectly.

### High-performance 64 bit electronics

The POS ColorTouch processes large amounts of data and masters complex calculations in a flash, thanks to its high-performance 64 bit processor.

### Numerous interfaces

Printers, scanners, card terminals, scales, vending machines, cash drawers, waiter key systems, additional keyboards and other devices can be connected conveniently via numerous different interfaces. A USB interface is also available to connect state-of-the-art peripheral devices.

### Flexible graphic user interface

Freely positionable display fields and buttons containing text, images or symbols ensure that user interfaces can be adjusted flexibly to current operating requirements. Alternating display pages show only those input options related to the operational stage in question, thereby simplifying operations and reducing incorrect entries.

### Maximum security

The POS ColorTouch's superior technology is immune to PC viruses. It functions without interference-prone standard operating systems, hard drives, unbuffered memory or loud fans.

### POS networks via Ethernet industry standard

The POS ColorTouch is designed for use in POS networks. It is completely compatible with all other Vectron POS models and the wireless waiter call system Vectron ServiceCall. The cost-effective 10/100 MBit Ethernet standard facilitates both inter-POS system connections and those with PCs.

### Simple data backup via USB stick

In addition to its robust construction, the POS ColorTouch secures all POS data on a standard USB stick at regular intervals, allowing it to be retrieved in a flash in an emergency.

### Extensive options for back office connections

The optional communication software, Vectron Commander, allows the POS ColorTouch to be controlled from your company headquarters. New items or prices can subsequently be sent to the POS system, which can also read out sales, order or working time data, around the world if necessary. Vectron Commander also facilitates connections with merchandise management and CRM programmes, working time administration and special back and front office software.

### Efficient remote maintenance and troubleshooting via RDT

Remote maintenance and troubleshooting complete the security package. Operating errors can be recognised rapidly, while problems can be analysed and usually solved directly.
