# POS SteelTouch PC

**Robust. Versatile. Precious.**

The Vectron POS SteelTouch PC is a PC-based POS system which operates with the same software as the proprietary models. As a result, it can be networked with all other Vectron POS systems and is the ideal addition in the event that typical PC functions such as e-mail and internet applications, windows applications or back office programmes are required at a workplace in addition to cash register functions. The Vectron POS SteelTouch PC has a robust, precious metal housing with a brushed stainless steel display frame and a 15-inch (38.1 cm) TFT touchscreen. It comes with the flexible POS software Vectron POS PC and Windows XP Professional as standard.

- Sophisticated, unusually robust metal housing with aluminium stand
- Crumb-, dust- and water-resistant display frame made from brushed stainless steel
- Intel Celeron M processor with 1.06 GHz
- 15-inch (38.1 cm), continuously adjustable TFT touchscreen which can be tilted as required
- 1024 x 768 resolution, 350 cd/m<sup>2</sup> brightness
- Pre-installed with Vectron POS PC and Windows XP Professional
- Silent, fail-safe, passive cooling system instead of interference-prone, dust-attracting fans
- Numerous interfaces for peripheral devices
- Adjustable POS software with flexible graphic user interface
- Simple network installation via Ethernet industry standard
- Extensive back office connection options
- Optional customer display, magnetic card reader and WLAN

Vectron Systems

Leading in POS Technology

## POS SteelTouch PC

### Sophisticated metal housing with TFT touchscreen

The Vectron POS SteelTouch PC housing is 100% metal and extremely robust, while the brushed stainless steel display front is crumb-, water- and dust-resistant (IP55). The power supply unit and cables are cleverly concealed in the black, powder-coated aluminum stand. The 15 inch (38.1 cm) colour TFT touchscreen is continuously adjustable and offers ample space for clear, convenient operations.

### Flexible POS software Vectron POS PC

The flexible POS software is freely configurable and facilitates industry-related special functions. This ensures that it is as suitable for bakeries and hospitality enterprises as it is for the trade industry or service providers. The user interface can be adjusted in line with current operating requirements. Display fields and buttons can be freely positioned and configured. Alternating display pages show only those input options related to the operational stage in question.

### Convenient use of PC functions at the POS

As the Vectron POS SteelTouch PC is a PC-based POS system which uses the Windows XP Professional operating system, typical PC applications such as e-mail, internet, Office or layout programmes can also be used after the corresponding software has been installed. This makes designing menus as easy as managing bookings or using MP3 or media players.

### Numerous interfaces

Numerous interfaces, including four USB ports, enable the connection of diverse peripherals such as printers, scanners, card terminals, vending machines, cash drawers, waiter key systems, keyboards etc.

### High safety standard

As a PC-based POS system, the Vectron POS SteelTouch PC is unable to guarantee the same level of system stability as Vectron's proprietary POS system models. The automatic backup of POS data on a USB stick when the POS PC software is shut down ensures that the risk of data loss is minimised. The additional use of the latest anti-virus software is strongly recommended.

### Superior passive convection cooling system

Instead of interference-prone, dust-attracting fans a passive convection cooling system is used for the electronics. The ventilation slots are protected against infiltration by liquids and objects.

### POS networks via Ethernet industry standard

The Vectron POS SteelTouch PC is designed for use in POS networks. It is completely compatible with all other Vectron POS models and the wireless waiter call system Vectron ServiceCall. The network installation takes place via the cost-effective 10/100/1000 MBit/s Ethernet standard.

### Efficient remote maintenance

The POS SteelTouch PC can also be read out or remotely maintained via the optional Vectron Commander. Analogue, digital or radio-based telecommunication connections are possible.

### Optional customer display, magnetic card reader and WLAN

A matching customer display with stainless steel housing and 2 x 20 characters can be integrated on the upper corner of the display as required. The POS SteelTouch PC can also be equipped with WLAN or a magnetic card reader, integrated on the right-hand side.
